Global Portable X-ray and CT Scan Devices Market 2015-2019

Description:
Portable X-ray and CT scan devices are used for patients who are immobile or have limited mobility because of various reasons. Portable X-ray and CT scan devices are wireless communication interface devices that have a long battery life and have the ability to share data. Portable X-ray and CT scan devices are capable of communicating using various types of networks such as WLAN, WMAN, WPAN, and WWAN. These devices use semiconductor technology. They are capable of monitoring patients and providing therapy, imaging, and diagnostics. The device is paired with a PACS machine attached to a computer with or without a wire (wireless), which enables it to capture and view images instantly. These devices help in tracking patients' health and provide a platform for maintaining and updating health records. Thus, advanced portable X-ray and CT scan devices have much to offer in terms of monitoring and treatment, especially in the home care environment.

The analysts forecast the Global Portable X-ray and CT Scan Devices market to grow at a CAGR of 7.51 percent over the period 2014-2019.
