Global Polylactic Acid (PLA) Market 2015-2019

Description: About PLA
PLA is a lactic acid-based polymer and is biodegradable in nature. It is made from raw materials including corn, wheat, sugar cane, dextrose, lactic acid, and others. Basic raw materials are fermented to produce lactic acid, which is the key agent for developing PLA. The unique properties such as rigidity and transparency, and features similar to PET makes the material a potential substitute to petroleum-based plastics. The applications of PLA are mainly in the following industries: Biodegradable Polymers, Food and Beverages, Medical and Pharmaceuticals, and Personal Care.

The analysts forecast the Global PLA market to grow at a CAGR of 19.97 percent over the period 2014-2019.
