Global CEMS Market 2015-2019

Description:
About CEMS
CEMS is an equipment used to measure emissions discharged from stationary sources. This system is essential for ensuring the mandated reductions of SO2 and NOx under the Acid Rain Program are easily achieved. CEMS helps in the continuous assessment of pollutants discharged into the atmosphere in the form of exhaust gases from combustion or industrial processes. Initially, CEMS was used to monitor oxygen, carbon dioxide, and carbon monoxide. Currently, it is used to adhere to air emission standards.

The analysts forecast the Global CEMS market to grow at a CAGR of 9.70 percent over the period 2015-2019.
