Hybrid Seeds Market in India 2015-2019

Description:
A hybrid seed or F1 or F1 hybrid is a first generation seed, which is produced by controlled cross pollination between different varieties of the same plant. The process of crossing seeds enables the production of desirable traits that are not possible through inbreeding between two plants. The subsequent seed produces plants with specific characteristics which are consistent from plant to plant. These seeds can adapt better to environmental stress, show greater resistance to diseases and pests, are more vigorous, and provide higher yields.

The analysts forecast the Hybrid Seeds market in India to grow at a CAGR of 14.1 percent during the period 2014-2019.
