Global Intermittent Catheters Market 2015-2019

Description:
Intermittent catheters are used for emptying the urinary bladder in patients who lose control over their bladder. These catheters are used for short term. Urine incontinence can be caused due to neurogenic bladder disorders such as spinal cord injury, spina bifida or multiple sclerosis, and non-neurogenic bladder disorders. The catheter is inserted into the urethra and guided to the bladder causing the urine to flow through the catheter tube and drain into the collection bag. Once the bladder is emptied, the catheter can be removed. Self-catheterization is also possible with these catheters; even children of seven or eight years can be trained to handle catheterization on their own. A parent or caregiver can help in case a patient is physically ill.

The analysts forecast the Global Intermittent Catheters market to grow at a CAGR of 6.33 percent over the period 2015-2019.

Covered in this Report
The report covers the present scenario and the growth prospects of the Global Intermittent Catheters market for the period 2015-2019. In terms of product type, the report is segmented into three: Uncoated, Coated, and Closed System Intermittent Catheters.

The report, the Global Intermittent Catheters Market 2015-2019, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the Americas, and the APAC and EMEA regions; it also covers the Global Intermittent Catheters market landscape and its growth prospects in the coming years. The report includes a discussion of the key vendors operating in this market.
