Global Foley Catheters Market 2015-2019

Description:
A Foley catheter, also called the indwelling catheter, is inserted into the bladder to drain urine. It comprises a balloon that holds the catheter in the bladder at one end. The balloon is filled with sterile water to prevent the catheter from being removed from the bladder. Urine is drained through the catheter tube into a collection bag. Foley catheters are used for long periods such as for weeks or a month. These catheters are used after urological surgeries to help patients urinate with ease, in conditions such as nerve-related bladder dysfunction, prostate hypertrophy, prostate cancer, and narrowing of the urethra.

The analysts forecast the Global Foley Catheters market to grow at a CAGR of 2.65 percent over the period 2015-2019.
