
Description:
About UGVs
UGVs are majorly used in the Defense sector for examining the terrain, supplying ammunition to the soldiers during a combat situation, carrying out rescue operations during disasters, and for detecting explosives. They are used in the areas and situations that are hazardous and dangerous to humans. They have sensors to observe the environment and terrain and provide data and images of the area. They navigate either autonomously or as per the instructions of the human operator. The growing usage of UGVs in the Commercial sector has led to an increase demand for them.

The analysts forecast the Global UGV market to grow at a CAGR of 31.34 percent over the period 2014-2019.
