Description: Hydraulic Workover Unit Market by Application (Onshore, Offshore), by Services (Snubbing, Workover), & by Region - Global Trends & Forecast to 2019

This report estimates the hydraulic workover unit market in terms of value in $million. This has been broken down into component regions and further split into countries.

The oil & gas industry witnesses high number of the E&P activities every year which is undertaken to meet the growing global energy demand. Hydraulic workover units form an integral part of the well lifecycle and can be used on the drilling, completion and workover phases. It provides increased lifting capacity during well intervention operations which cannot be performed using either a wireline or a coiled tubing unit. Furthermore, the increase in the petroleum production from the regions, such as the Middle East and North America, has exceeded the oil & gas demand which has resulted in the sudden decline of oil prices during the end of 2014.

Hydraulic workover unit also allows the operator to perform workover operations on live wells. This is a unique feature offered by hydraulic workover unit which is particularly useful while performing well intervention on gas wells.

The size of the overall market is determined by forecasting techniques based region-wise well count of both producing wells as well as the new wells that were drilled in different geographical regions which are validated through primary sources. The market is growing at a CAGR of approximately 6.6 % from 2014 to 2019.

This report also includes the profiles for leading oilfield service provider, and equipment manufacturers, such as:
