Global Subsea BOP Market 2015-2019

Description:

About subsea BOP

BOP is a high pressure mechanical safety valve system at the top of a well head, which prevents uncontrolled fluid flow in the well bore. This device is essential in the oil and gas industry as it monitors and controls pressure while drilling and is the last line of defense to prevent any subsea leakages or surface explosions. A BOP stack consists of two types of BOPs, annular BOP and ram BOP. An annular BOP is placed at the very top of the stack and then two, three, or four ram BOPs are placed below the annular BOP. BOP stack contains the wellbore fluids either in the annular space amid casing and tubing or in an exposed hole during drilling, completion, and testing operations.

The analysts forecast the global subsea BOP market to grow at a CAGR of 6.5% over the period 2014-2019.

The global subsea BOP market can be segmented into two: annular BOP and ram BOP.

The report, the Global Subsea BOP Market 2015-2019, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the Americas, and the APAC and EMEA; it also covers the global subsea BOP market landscape and its growth prospects in the coming years. The report includes a discussion of the key vendors operating in this market.

Key regions
- Americas
- APAC
- EMEA

Key vendors
- Cameron
- GE energy
- National Oilwell Varco
- Rongsheng Machinery Manufacture

Other prominent vendors
- Proserv
- Tenaris
- Uztel

Market drivers
- Growing global oil and gas consumption
