Global Peritoneal Dialysis Market 2015-2019

Description:

About peritoneal dialysis

Peritoneal dialysis is a needle-free treatment and can be performed either by a patient or with the help of a care partner. It is used to remove waste products and extra fluid from the body during the issue with kidney functions. Peritoneal dialysis differs from hemodialysis as in this treatment the blood is not taken from the body to treat the patient. In peritoneal dialysis, a tube called PD catheter is placed in the belly of the patient, and the dialysis is carried out by sterile fluid flowing through the lining of the belly called the peritoneum. This helps the blood flow into and out of the peritoneal space and the blood is cleansed inside the body.

The analysts forecast the global peritoneal dialysis market to grow at a CAGR of 4.40% over the period 2014-2019.
