About Capsule Endoscopy

Capsule endoscopy is a modern technique used to examine the gastrointestinal tract. Wireless capsule endoscopy is a novel breakthrough in the biomedical industry and is expected to drive the development of the next-generation medical devices in the field of endoscopy. It has a tiny wireless camera to capture pictures of the digestive tract of a patient. The camera is situated inside a vitamin-sized capsule and can be swallowed by the patient, which is used for the diagnosis and treatment of diseases of the upper gastrointestinal tract (stomach, esophagus, colon, and duodenum). It may also be useful in detecting inflammatory bowel disease (Crohn's disease), gastroesophageal reflux disease (GERD), polyps, ulcers, bowel function, diarrhea, anemia, and tumors of the small intestine. WCE procedure was enabled for the first time as a painless diagnosis to examine the gastrointestinal (GI) tract.

The analysts forecast the global capsule endoscopes market to grow at a CAGR of 10.67% over the period 2014-2019.
