Europe Open System MRI Market - Growth, Trends And Forecasts (2016 - 2021)

Description: The European Open System MRI market is fast rising. MRI is replacing CT in diagnosis because it is more sensitive and safer as it does not use ionizing radiation. Within the fast rising MRI market, the open system market is taking over the currently popular closed system market. This is because the open system does not enclose the patient with the magnetic fields only the top and the bottom. This is more preferred as it does not cause claustrophobia which is a very common symptom in patients. The rising incidence of cardiovascular, neurological and gastrointestinal diseases and cancers, MRI has become a popular diagnostic tool in the healthcare domain.

The European countries like UK, France and Germany have a high per capita income and good healthcare policies making facilities such as MRI more affordable. There is a rising aging population in these countries increasing the demand for advanced healthcare facilities such as MRI. Constant advancements in technologies are made because to the large investments made on healthcare research.

The market can be segmented based on the resolution (low-field, mid-field and high field), the applications (Neurology, Cardiology, Gastroenterology and Oncology) and geographically (UK, France, Sweden, Scandinavia, Germany and other countries). The key players in the industry are GE, Hitachi Medical Corporation, Philips Healthcare, Siemens Healthcare and Toshiba Medical Systems.

Drivers: Advancement in technology and healthcare facilities contribute to the growing Open System MRI market. It is also preferred over the closed system MRI and is fast replacing it. The increased incidence of diseases and rise in aging population are also market drivers.

Constraints: The increasing number of accidents recorded in patients with implants such as pacemakers and cochlear implants. The technology also requires skilled professionals for performing the diagnosis and analyzing the results.
