Robot-assisted surgery offers broader visualization of the operating area and precision control of surgical instruments. In a robotic surgery procedure, a surgeon visualizes the operative field with the help of video monitor and uses a console to control the robotics arms, which performs the procedure.

The main aim of robotic surgery is to reduce patients stay in hospital by reducing the pain and scarring associated with surgery to facilitate faster recovery.

The analysts forecast the global robotic surgery market to grow at a CAGR of 10.66% over the period 2014-2019.
