Global Recycle Market for Plastic Bottle Industry 2015-2019

Description: About Plastic Bottle Recycling

Recycling of plastic bottles mainly refers to the reuse of the plastic materials and hence to reduce the amount of waste going into landfills by ultimately converting them into lower or same grade plastic bottles. These bottles are used for applications depending on their properties. Most plastics are semi-porous and absorb molecules of food or beverage contained. The residue removal is a very tedious task, and any additional heating may damage plastic. In order to convert plastic bottles into food grade plastic, bottles are hydrolyzed to monomeric form and finally passes through purification and re-polymerization process before converting to a new form. The plastic bottle recycle market is picking up pace and is expected to grow at a steady rate in the near future, boosted by the increasing demand for recycled plastic bottles and growing environmental concerns.

The analysts forecast the global recycle market for plastic bottle industry to grow at a CAGR of 3.9% over the period 2014-2019.
