Interactive Residential Security Market in the US 2015-2019

Description: About Interactive Residential Security

Interactive residential security is a part of physical security and ensures the safety of residential buildings and individuals from various attacks with the help of interactive systems by reducing emergency response time. With an increase in theft and burglary in residences and a rise in the aging population in the US, the demand for interactive residential security solutions such as energy management and climate control systems and PERS has increased. The installation of physical security solutions in residences has led to a reduction in the number of criminal attacks on residences. Residential security solutions provide around-the-clock protection to residences from gas leaks, fire, and other hazards. They provide 24/7 monitoring services to homeowners and an option to raise an alert in case of emergency.

In US, such solutions are also used to monitor infants and pets at home. Also, they are accessible from any remote location through smart devices such as cell phones, tablets, and laptops.

The analysts forecast the interactive residential security market in the US to grow at a CAGR of 31.87% over the period 2014-2019.
