Global Trade Finance Market 2015-2019

Description:

About Trade Finance

Trade finance is provided by banks to various trading companies for cross-border transactions. It drives the growth of a country's GDP. When a country produces goods or services, it exports some of those goods and services to other countries. However, there is a time lag between the production and delivery time, which leads to a certain degree of uncertainty about whether the parties involved will honor their part of the transaction. Hence, the importing country appoints a bank to issue a financial instrument that promises to make the payment to the exporting country upon the successful delivery of the consignment.

The analysts forecast the global trade finance market to grow at a CAGR of 3.29% over the period 2014-2019.
