Global Carbon Capture and Storage Market in Energy 2015-2019

Description: About Carbon Capture and Storage

Carbon capture and storage technology stores and captures man-made CO2 without releasing it into the atmosphere. The CO2 is captured at its source and converted into a concentrated stream for transportation and storage. Carbon capture and storage is an emerging technology, which is gaining popularity as companies have increased their investment because of stringent emission regulations and related penalties.

The analysts forecast the global carbon capture and storage market to grow at a CAGR of 31.63% over the period 2014-2019.
