Transdermal Drug Patches to 2022

Description: Transdermal drug patches to 2022 analyzes products, markets and commercialization factors for drug patches. The report examines the advantages of ease of use, painlessness, disposability, control of drug delivery and avoidance of first-pass metabolism by the liver. Advances in synthetic materials and patch design have led to patches that are more aesthetically acceptable and that are capable of delivering sustained dosing of active compounds for several days in a smaller package.

Growth in demand for drug patches is being driven by several factors – factors with strong demographic and population trend underpinnings. Further improvements to transdermal transport and the introduction of new patch designs will keep this segment expanding through 2022.
