Global Endoscopy Devices Market 2015-2019

Description: About endoscopy devices

Endoscopy is a minimally invasive medical procedure used for the diagnosis, prevention, and treatment of complications in the internal organs. The procedure is performed using a device called endoscope, which is inserted into the patient body either through the natural cavities or through incisions. The camera or the light source at the tip of the endoscope allows physicians or medical professionals to view the internal organs of interest. Most of the endoscopic procedures are performed in physicians' office or out-patient setting and involve less recovery time and patient discomfort.

The analysts forecast the global endoscopy devices market to grow at a CAGR of 5.53% over the period 2014-2019.
