
Description: MPC prosthetics demand has increased several folds in recent years due to increasing physical demand from amputees. According to aggregated data on amputation statistics by WHO, CDC, NHS, National Limb Loss Information Center and several clinical studies, approximately 80% of all lower extremity amputations are dysvascular amputations. Upper extremity amputations occur most prominently due to trauma incidents and congenital cases. CDC estimates suggest approximately 24 million diabetics live in United States alone and an estimated 150,000 people in U.S. are required various levels of amputations due to combined causes (vascular diseases, diabetes, trauma, industrial accidents, automobile accidents and military combat incidents). The increasing incidence is expected to be a moderately strong growth driver for this market throughout the forecast period.

MCPs have several potential advantages over traditional prostheses, including: reduced energy expenditure, improved ambulation, improved safety, and improved quality of life. They are also more expensive to purchase and fit than non-microprocessor-controlled prostheses (NMCP). Due to the cost of advanced prosthetics, they continue to be out of reach for most people. Even in developed countries the devices are not affordable to most as government insurance such as CMS deny reimbursing the prices what may be considered as exorbitant by many. Most insurance experts maintain that the purpose of CMS and other public insurance payers is to compress the cost of these devices in order to make sure they are available for common masses. Bionic knees and ankles such as the genium, X3, BiOM T2 cost in excess of US$ 75,000. This is excluding the surrounding costs that require maintenance, spares and software upgrades of some types. 3D printing is also going to play a major role in this market in coming years. 3D printing is addressing several aspects of the prosthetics market particularly those concerned with aesthetic looks and functionality. This is because fitting every amputee has various challenges with respect to shape, size and comfort. 3D printing initiated into manufacturing of intelligent prosthetics will greatly reduce the price and make it more affordable to civilians.

Prosthetics have moved on from simply being an aesthetic replacement to the limb to being an actual physical replacement with all the functions of a biological limb. With advanced electronics, miniaturization of components, light durable, extremely strong materials and application of computer coding bionic arms capable of being better than natural limbs will be seen in the not so distant future. The advancing technology will push the high-priced models that are in the market currently into the ground, thus becoming available for common masses and will eventually ensure the adoption of high-tech systems in the coming years.

Contents:

1. Preface
   1.1 Research Scope
   1.1.1 Market Segmentation
   1.1.2 Postulations
   1.2 Methodology of Research
   1.2.1 Companies covered in this report

2. Précis
   2.1 Market Inferences

3. Market Dynamics
   3.1 Market Drivers
   3.1.1 Increasing ambulation and activity amongst all types of amputees
   3.1.2 Increasing incidence of vascular diseases, diabetes, industrial accidents
   3.1.3 Advancing technology
   3.1.4 Demand for improved lifestyle and increasing disposable income
   3.2 Market Inhibitors
   3.2.1 High cost of device pushing sales of mechanical prosthesis as compared to intelligent systems
   3.2.2 Disproportionate reimbursement
   3.3 Opportunities
3.3.1 Demand from emerging economies and large unmet need in Asia-Pacific, Middle-East and Latin America

4.1 Introduction
4.2 Microprocessor Controlled (MPC) Prosthetics
4.2.1 MPC Prosthetic Knees
4.2.1.1 C-Leg
4.2.1.2 Rheo Knee
4.2.1.3 Plie
4.2.1.4 Others
4.2.2 MPC Prosthetic Feet
4.2.2.1 Proprio Foot
4.2.2.2 Elan
4.2.2.3 Raize
4.2.2.4 Others
4.2.3 MPC Prosthetic Arms
4.2.3.1 Bebionic
4.2.3.2 iLimb
4.2.3.3 Michelangelo
4.2.3.4 Others
4.3 Exoskeletons
4.3.1 ReWalk
4.3.2 Ekso - Bionic Exoskeleton
4.4 Assistive Rehabilitation Systems
4.4.1 Handy 1 - Assistive Robot
4.4.2 iARM - Robotic Arm
4.4.3 Myomo Mobility System
4.4.4 Lokomat

6.1 Key Players Market Share: Global Market for Robotics in Healthcare, 2014 (%)
6.2.1 Mergers and Acquisitions
6.2.2 Joint Ventures, Expansion and Collaborations
6.2.3 New Product Launches
6.3 Competitive Landscape: Strategies

7. Epilogue

List of Figures:

Ordering:
Order Online - http://www.researchandmarkets.com/reports/3288492/
Order by Fax - using the form below
Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct and select the format(s) you require.

Product Name: Global Robotic Prosthetics, Exoskeletons and Assistive Rehabilitation Technologies Market Assessment & Forecast: 2015-2019
Web Address: http://www.researchandmarkets.com/reports/3288492/
Office Code: SCH3X287

Product Formats
Please select the product formats and quantity you require:

<table>
<thead>
