Global Automotive Catalytic Converter Market 2015-2019

Description:

About Automotive Catalytic Converters

A catalytic converter is a device used to convert exhaust emissions such as CO, HC, and NOx into less harmful emissions such as CO2, water, and N2. Precious metals such as platinum, palladium, rhodium, and vanadium are used as a catalyst coat on the ceramic beads in the catalytic converter for the conversion. The automotive catalytic converters are highly priced because of the expensive nature of the precious metals. To meet the growing need for fuel economy and to comply with the stringent emissions norms, manufacturers are developing more efficient automotive catalytic converters. The rising demand for and sales of automobiles across the world contributes to the market growth.

The analysts forecast the global automotive catalytic converter market to grow at a CAGR of 6.94% over the period 2014-2019.

Covered in this Report

The global automotive catalytic converter market can be segmented into five divisions on the basis of type: three-way catalysts (TWC), lean NOx catalysts (LNC), lean NOx trap (LNT), selective catalytic reduction (SCR), and diesel oxidation catalyst (DOC). In addition, the market can be segmented into three divisions on the basis of material: platinum, palladium, and others (such as rhodium and vanadium).
