Global Butadiene Market Forecast and Opportunities, 2020

Description: According to the report "Global Butadiene Market Forecast & Opportunities, 2020", global butadiene market is forecast to cross 13 million metric tons in volume terms by 2020, on account of rising investments and expanding synthetic rubber manufacturing sector. In addition, growing automotive industry, especially in Asia-Pacific, is projected to drive the market for butadiene over the next five years. SBR and PBR are two prime derivatives that accounted for a lion's share of the total butadiene consumption in 2014. Few of the major global players involved in butadiene production include LyondellBasell, Royal Dutch Shell, TPC Group, BASF and Braskem.

Butadiene, an organic compound, is obtained as a by-product during the production of ethylene and propylene. Conventionally, butadiene was produced through steam cracking of naphtha followed by extractive distillation. Dehydrogenation of butane or ethanol is also one of the processes used for producing butadiene. On account of high cost involved in producing butadiene by conventional methods and recent discoveries shale gas, especially in the United States, producers are shifting to using lighter feedstock, such as ethane and propane, for producing butadiene. Synthetic rubber industry is the largest consumer of butadiene, wherein it is processed for producing derivatives such as Styrene Butadiene Rubber (SBR), Polyybutadiene Rubber (PBR), Acrylonitrile Butadiene Styrene Resins (ABS), Styrene Butadiene Latex (SB Latex), Adiponitrile, and Nitrile Rubber (NR). These derivatives are majorly used across automotive sector for manufacturing tyres and other components.
