Global PTCA Balloon Catheter Market 2015-2019

Description:

About PTCA Balloon Catheter

PTCA is a minimally invasive procedure to open up blocked coronary arteries to permit unhindered blood flow to the heart muscle. In this procedure, catheters are positioned within the arteries to compress the plaques within a clogged coronary artery. A PTCA balloon catheter is a type of soft catheter equipped with a tiny inflatable balloon at its tip, which is inserted during a catheterization procedure into an artery that has been constricted by the addition of fatty deposits. The balloon is then bloated to clear the blockage and widen the artery. PTCA balloon catheters were the first devices used in the field of interventional cardiology. These catheters are also employed in the positioning of stents during angioplasty. PTCA balloon catheters are used in the PTCA procedures to compress the plaques within a blocked coronary artery.

The analysts forecast the global PTCA balloon catheter market to grow at a CAGR of 3.48% during 2014-2019.

Covered in this Report

The report includes the present scenario and the growth prospects of the global PTCA balloon catheter market for 2015-2019. The market can be segmented into four divisions: normal balloon catheter, drug eluting balloon catheter, cutting balloon catheter, and scoring balloon catheter. To calculate the market size, we consider the revenue generated from these PTCA balloon catheters.

The report, Global PTCA Balloon Catheter Market 2015-2019, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects in the coming years. The report includes a discussion of the key vendors operating in this market.

Key Regions
- Americas
