Organic Corrosion Inhibitors Market: By Type (Benzotriazole, Amines, Phosphonates, Aldehydes and Others) By Application - Forecast (2015-2020)

Description: Corrosion inhibition is the most effective way of protecting internal corrosion of metals which when an inhibitor is added in small concentrations provides temporary protection. Corrosion inhibitors act as additives to the fluids that surround the metal or related object and decrease the rate of metal oxidation. Organic corrosion inhibitor are carbon compounds used for surface adsorption, which is a film-forming but occasionally they act as both cathodic and anodic inhibitors. Surface adsorption process deals with the hydrophobic film adsorbed molecules on the metal surface that acts as a barrier to the dissolution of the metal in the electrolyte. Anodic corrosion inhibitors block the anode reaction and support the natural reaction of metal surface by forming a film adsorbed on the metal. The cathodic corrosion inhibitors prevent the occurrence of the cathodic reaction of the metal.
