The primary objective of the report is to offer updates and market opportunities in the global functional films market, which is significantly playing an important role in various applications and industries, such as automotive, electronics, packaging, healthcare, and energy.

Functional films is a film or a sheet applied on a substrate to provide improved functionality and novel properties in order to increase the overall potential of the product. They are protective, transparent, heat-and chemical-resistant, durable, and flexible in nature. The growing trend of miniaturization of devices has led to increased demand for functional films, which can either be thick or thin. In addition to having dimensional benefits, the functional films are compatible with the current modern technologies and varied types of materials. They have other additional properties such as, they require less energy in their processing and they can be fabricated to complex structures according to the requirement. Functional films can be conductive, adhesive, optical, and water soluble.
