Global Water Recycle and Reuse Market 2015-2019

Description:
About Water Recycle and Reuse
Water recycling is a process of reusing treated wastewater for useful purposes such as industrial processes, agricultural and landscape irrigation, domestic and commercial usage, and ground water recharge. Wastewater can be tailored to meet the requirements of specific planned application through the process of recycling. The production of recycled water is also referred to as water reclamation. Water recycling not only conserves the existing water resources but also reduces the need for new water supplies. It offers financial and resource savings.

Some of the beneficial usage of water recycling and reuse are as follows:
- Commercial, residential, and municipal usage
- Agricultural uses
- Industrial uses
- Augmenting water supplies
- Environmental and recreational uses

Various treatment techniques are employed in water recycling and reuse, including conventional water treatment techniques such as coagulation, flocculation, sedimentation, and filtration, which may be followed by advanced treatment techniques such as membrane filtration, chemical treatment, and MBR technologies to provide high degree of clarification, removal of organics, filtration, and disinfection.

The analysts forecast the global water recycle and reuse market to grow at a CAGR of 22.39% in terms of volume of water recycled and reused and at a CAGR of 19.2% in terms of revenue during 2014-2019.
