Global Li-Ion Battery Market for Power Tool 2015-2019

Description:
Li-ion batteries are mainly used in devices such as power tools, and handheld devices owing to their high energy density and rechargeable properties. There are several types of power tools such as engine-driven power, electric power, and pneumatic power tools. Electric power tools work on both electric and battery source of power. Currently, most companies are manufacturing power tools that operate on Li-ion batteries as it provides high power capability despite its compact size and reduces the overall weight of power tool. Power tools are can be used for various purposes such as screw driving, drilling, chiseling, shaping, routing, sanding, buffing, polishing, and leveling.

In addition to being used in the residential sector, power tools are adopted by several companies across automotive, infrastructure, construction, woodworking, aerospace, and electrical and electronics industries.

The author forecasts the global Li-ion battery market for power tool to grow at a CAGR of 9.3% during 2014-2019.
