Global Military Aerospace Simulation and Training Market 2015-2019

Description:
A military flight simulator is used to artificially re-create aircraft flight and various aspects of the flight environment. A flight simulator is categorized into two types, viz. full flight simulators (FFS) and flight simulation training devices (FSTD). Full flight simulator is the replica of a specific type or model and series of an aircraft cockpit, whereas FSTD replicates flight controls and devices.

There are four levels of FFS: Level A to D. Level D refers to the highest standard, and provides acceleration in all six degrees of freedom (DOF). A flight simulator includes aircraft, environment and cueing simulation.

The analysts forecast the global military aerospace simulation and training market to grow at a CAGR of -1.46% during 2014-2019.
