
Description:
Flow sensors are used for measuring the flow of liquids, slurries, viscous media, gases, air, steam, and bulk solid materials. The device constitutes indicator, scale, top, and tube. The sensitivity varies depending on different characteristics of the fluid, like density, pressure, temperature, and viscosity. The performance of the flow sensor is measured based on parameters, such as accuracy, reliability, range, and linearity. It is used extensively in process and discrete industries, including oil and gas, water and wastewater treatment, chemical and petrochemical, food and beverage, pulp and paper, and automotive.

The analysts forecast the global flow sensors market to grow at a CAGR of 7.68% during 2014-2019.
