Global Positive Displacement Pumps Market 2015-2019

Description: About Positive Displacement Pumps
Pumps are machines used to move fluids from one place to another, and they are also used in industrial plants to facilitate the circulation of fluids through a system to increase the operational performance of the plants. A positive displacement pump moves fluid by trapping a fixed amount of it, and then forcing that trapped volume into the discharge pipe. These pumps are widely used across the globe by various industries such as mining, oil and gas production, oil refining, chemical, power generation, food and beverage, machinery, aerospace, shipbuilding, automotive, pharmaceutical, pulp and paper, marine, water and sewerage, agriculture, and construction.
