

Fully revised and updated with analysis of world energy utilization, incentives and utility rates, and new content highlighting how energy efficiency can be achieved through 1 of 16 outlined principles and programs, the book presents cost effective analysis, case studies, global examples, and guidance on building and site auditing.

This fully revised edition provides a theoretical basis for conservation, as well as the avenues for its application, and by doing so, outlines the potential for cost reductions through an analysis of inefficiencies.

- Provides extensive coverage of all major fundamental energy management principles
- Applies general principles to all major components of energy use, such as HVAC, electrical end use and lighting, and transportation
- Describes how to initiate an energy management program for a building, a process, a farm or an industrial facility
