Dry Powder Inhalers to 2022

Description: Developers continue to refine dry powder formulations and the inhalers that will be used to deliver them. The result is dry powder inhalers capable of delivering therapeutic drugs reliably and with minimal patient-to-patient delivery event variation. Several important trends are now evident in this sector. The first is the growing number of new (read NDA) DPI combination products featuring inhaler designs that have been engineered for the drug, therapy and patient population that they target. There has also been a definite tilt toward COPD, the indication specified in two-thirds of the clinical trials for URT initiated since 2013. And inhaled drugs for glycemic control, a market that evaporated with the withdrawal of Exubera, are showing signs of life.
