GaN Devices for Power Electronics Patent Investigation

Description: The potential energy efficiency savings from the adoption of GaN power semiconductor devices has led to significant research and development that is now beginning to be realized in commercially available devices. Today, there are only a few players selling Power GaN products (Infineon/IR, EPC, GaN Systems, Transphorm) and the market is still small, estimated at $10M in 2015 in Yole Développement's July 2015 'GaN and SiC devices for power electronics applications' report. But the ramp-up will be quite impressive, starting in 2016, at an estimated 93% CAGR through 2016-2020, with an estimated 2020 device market size of more than $300M in the baseline 'nominal' scenario.

The GaN power industry is consolidating in preparation for this significant growth, and GaN technology is spreading across the value chain. This can been seen in recent mergers and acquisitions (Infineon/IR, Transphorm/Fujitsu’s GaN Power Conversion business), license agreements (Infineon/Panasonic, Transphorm/Furukawa) and the will of several firms to move onto the mass production stage (Transphorm/Fujitsu). As GaN power devices are now poised for rapid market adoption, a strong intellectual property (IP) position is essential for companies to grow their GaN business. In today's Power GaN market, it is crucial to understand the global patent landscape through in-depth analyses.

This enables you to anticipate changes, harvest business opportunities, mitigate risks and make strategic decisions to strengthen your market position and maximize return on your IP portfolio.

More than 1,960 patented inventions related to GaN power electronics have been published worldwide up to April 2015. The first patents were published in the mid-1990s by silicon power companies (Furukawa Electric, International Rectifier, Infineon). But the take-off of patenting activity was really observed ten years later with a first wave of patent publications over the 2005-2009 period, mainly due to American companies (International Rectifier, Power Integrations) and Japanese companies (Panasonic, Rohm, Furukawa Electric, Sumitomo Electric, Toshiba, Toyota). A second wave of patent publications started in 2010, mainly originating from Mitsubishi Electric, Fujitsu, Transphorm, Avogy and Infineon, while the first commercial products, collaborations, mergers and acquisitions emerged. Quite recently LED pure-players like Seoul Semiconductor have entered the Power GaN IP arena.

The time evolution of patent filings has reached a peak, and we expect a slowing down of new patent applications. Meanwhile, granted patents worldwide should increase after successful prosecution of the numerous pending patent applications. We believe the second peak of patent filings combined with the significant ratio of patents in force and the large number of patent applications still in the pipeline worldwide is an indication of the technology maturity heralding a future ramp-up of the GaN power market.

Key Features Of The Report:

1. IP trends including time evolution and countries of filing
2. Power GaN market data and forecasts
3. Ranking of main patent applicants
4. Joint developments and IP collaboration network of main patent applicants
5. Key patents and granted patents near expiration
6. Relative strength of main companies' IP portfolios
7. Matrix showing patent applicants and patented technologies
8. Segmentation of patents:
   - by technology levels, including epiwafers, devices, modules and packaging,
   - by technical challenges, including current collapse, E-mode and cascode,
   - and by type of substrate including SiC, silicon, sapphire and bulk GaN.
9. Power GaN IP profiles of 9 major companies, with key patents, technological issues, litigation, licenses, partnerships, IP strength, IP strategy and latest market news

10. Excel database with all patents analyzed in the report, including technology segmentation

Objective Of The Report:

Review the context for Power GaN technology and market trends.
- Review Power GaN’s technical challenges and as known solutions.
- Understand the IP landscape for GaN power electronics.
- Comprehend key trends in IP and technology development.
- List the major players and the relative strength of their patent portfolio.
- Name new players.
- Identify IP collaboration networks between key players (industrial and academic).
- Position key players within the value chain and understand their strategic decisions.
- Identify current legal status of patented technologies.
- Identify key patents by assignees and technology.
- Identify blocking and valuable patents.
- Overview of past and current litigations and licensing agreements.
- Avoid patent infringement.
- Appreciate the link between the patent landscape and market evolutions.

Contents:

1. The authors
2. Scope of the report
3. Key features of the report
4. Objectives of the report
5. Methodology
6. Patent search strategy
7. Patent segmentation
8. Summary
9. Introduction
   - GaN devices for power electronics
   - GaN device market size split by applications markets
   - GaN device market 200V vs. 600V
10. Noteworthy news
11. IP overview
   - Time evolution of patent publications
   - Power GaN patent assignees
   - IP collaboration network
   - Power GaN patent assignee: origin of GaN involvement
   - Main power GaN players and related business model
   - First appearance of key players in the power GaN IP arena
   - Time evolution of patent publications
   - Time evolution of granted patents
   - Announced GaN transistor products
   - Mapping of patenting activity
   - Time evolution of patent applications by country
   - Time evolution of granted patents by country
   - Market domination results from previous IP lead period
   - Patent litigations and market evolution
12. Patent segmentation
- Technology segments
- Patent family split by technology segment
- Time evolution of patent publications split by technology segment
- Main patent assignees by technology segment
- Matrix key IP players / technology segments
- Mapping of patent filings by technology segment
- Industrial supply-chain
- Technical challenges
- Main challenges for lateral GaN devices
- Main challenges for vertical GaN devices
- Main challenges for packaging
- Device parasitic
- Patent family split by technical challenges
- GaN power transistor: patent differentiation of key IP players
- Matrix key IP players / technical challenges

13. Focus on key technology segments
- Power semiconductor devices
- Power components

For each segment:
- Ranking of patent assignees
- Time evolution of main patent assignees
- Degree of specialization of patent assignees
- Mapping of patenting activity
- Countries of priority patents for main patent assignees
- Countries of patent filing for main patent assignees
- Mapping of main current patent holders
- Mapping of main current patent applicants
- Power GaN IP players
- IP collaboration network
- Assignee citation network
- Summary of main assignees' patent portfolio
- Leadership of patent assignees
- Strength index of patent portfolios
- IP blocking potential of main patent assignees
- Potential future plaintiffs
- Granted patents near expiration

14. Focus on key power GaN IP players
- Timeline evolution of patent publications
- Mapping of granted patents
- Mapping of pending patents
- Geographical distribution of granted patents and pending patents
- Patent portfolio quantity/quality score
- Tentative estimation of market share of GaN device makers
- Financial investment to pure GaN players

15. Power GaN IP profile of key players
- Infineon/International Rectifier
- Efficient Power Conversion (EPC)
- Transphorm
- Fujitsu
- Power Integrations
- GaN Systems
- Panasonic
- Mitsubishi Electric

For each key player:
- Dynamics of their patent applications
- Key features of their patent portfolio
- IP strength
- Collaboration network
16. Conclusions

Ordering:

Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit
http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct and select the format(s) you require.

Product Name: GaN Devices for Power Electronics Patent Investigation
Web Address: http://www.researchandmarkets.com/reports/3387935/
Office Code: SCH34CS

Product Formats
Please select the product formats and quantity you require:

<table>

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB98533083313083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
