
Description: Injection molding machine, extruder and blowing machine are the top 3 products in Chinese plastic processing machinery market. As the leading product, currently injection molding machine accounts for nearly 40% of the total market share.

In recent years, injection molding machines produced by China have been changing from regular models to large machines, all-electric machines, electro-hydraulic machines and dedicated injection molding machines.

For sales, in 2010 sales of injection molding machines of China exceeded RMB20 billion for the first time, in 2014 the figure slightly dropped by 6.85% to RMB 23.1 billion. The annual output of injection molding machine in 2014 reached around 83 thousand units, a 2.35 % decrease compared with 2013.

China boasts a major trader of injection molding machines in the world. 2012 witnessed a notable turning point in terms of trading in China injection molding machine industry, with the export exceeding the import for the first time, and with the trade surplus amounting to USD111.85 million. In 2015, the trade surplus further expanded, with the value in the first seven months hitting USD 172.4 million.

Haitian International Holdings Limited, the world's largest injection molding machine manufacturer, has set up distribution networks in China, Germany, Brazil, Turkey, and Vietnam. Haitian's FY14 results were very decent, it's advanced PIMMs are likely to support revenue growth. However, the small tonnage PIMMs only recorded mild growth in FY14 under current tough market. The medium-to-large tonnage PIMMs might continue outperform small tonnage PIMM driven by demand of two-plate PIMMs from developed countries, while the growth of medium-to-large tonnage PIMMs might only partly offset the weak sales growth of small tonnage PIMMs.
