Immunodiagnostic Market in China 2015-2019

Description: About immunodiagnostics
Immunodiagnostics is a class of in vitro diagnostics that utilizes antigen-antibody reaction as its primary means of detecting infectious diseases, tumors, diabetes, proteins, therapeutic drugs, and allergens. Immunodiagnostics tests are analytical methods that require different immunodiagnostics instruments and antibodies as reagents against the desired antigens to be detected. The test results are used to diagnosis diseases, and they have widespread clinical applications. Immunodiagnostics tests are also helpful in the field of forensic science, environmental science, and food analysis.

The rate of chronic diseases and infections in China has increased significantly in the past few years. Therefore, there is an increase in the demand for immunodiagnostics tests to detect diseases at an early stage, driving the immunodiagnostics market in China.

The analysts forecast the immunodiagnostics market in China to grow at a CAGR of 16.6% over the period 2014-2019.
