Application Lifecycle Management (ALM) Market Share Analysis: Market Shares, Analysis, and Index, Worldwide, 2006 to Current, Quarterly

Description:
New systems must accommodate all manner of server, cloud, and virtual computing platforms. Software frameworks are evolving that require attention to the entire application focus. Mobile devices need to be accommodated. A software framework is a platform for developing software. Applications depend on functions that can be used to input variables from a process.

Input is used to manage hardware devices, and permit interaction with system software. ALM streamlines the development process permitting programmers to achieve efficiency through reuse of code when developing a new application.

A framework is similar to an application programming interface (API), though a framework includes an API. A framework serves as a foundation for programming, while an API provides access to the system elements. ALM supports code libraries, a compiler, and other programs used in the software development process.

Report Methodology:
- This product is created using a methodology which includes conducting interviews, mining published data, tracking industry trends, and expert analysis. The combination of the different sources of information allow a unique look at each company's quarterly performance inside a given market segment. This analysis provides a view of the total market segment, where direct comparison between large and small companies is facilitated.
- Interviews are conducted with vendors, former employees, distributors, users, and industry experts who inform senior staff of ongoing trends and events. Sufficient interviews are performed to insure understanding of the selected market segment.
- Published data sources included in market segment analysis are social media comments, blogs, SEC filings, and Internet searches.
