
Description: Whether you are already active in the antiparasitics market, or looking to venture in, this report is essential reading to stay ahead of the competition.

The antiparasitics sector is a fast growing area of interest to all animal health companies.

Animal Parasiticide are used to prevent and treat infestations such as ticks, mites, lice, and fleas, tapeworms, protozoa, trematodes or flukes, and nematodes (roundworms such as heartworms), among others.

Companion animal ownership has grown rapidly in recent years, while the number of livestock animals in developing countries is also on the rise, as dietary changes lead to higher meat consumption, and the rise of aquaculture.

This comprehensive report explains in depth the different types of parasites that affect dogs, cats, horses, cattle, sheep, pigs, poultry, and fish.

Drugs, vaccines and other antiparasitic products are fully covered, and the leading manufacturers profiled.
