Global Agroscience Market 2015-2019

Description: About agroscience

The world population is growing at an alarming rate. It is estimated that by 2050, the global population will grow more than 9 billion. This is likely to reduce the arable land as increasing number of people will be living in cities. With rising population, the demand for food will also increase. In addition, the demand for animal feed and biofuel will boost agricultural production. Soil erosion and land pollution are also responsible for the reduction in the size of arable land per person. This puts pressure on farmers to improve their crop yield with limited agricultural land, thereby increasing the demand for agrochemicals that help enhance crop yield and quality. Pesticides help in controlling pests that feed on crops and soil nutrients meant for crops.

The report forecasts the global agroscience market to grow at a CAGR of 12.25% over the period 2014-2019.
