Wood-Plastic Composites Market 2015-2019

Description: About wood-plastic composites
Wood-plastic composites are materials made of wood, flour, or fiber and plastic resins. These composites contain a certain number of additives that foster the integration of wood and plastic, and aid in the manufacturing process. Most wood-plastic composites are manufactured using wood and plastic wastes or recyclates, while others are manufactured using virgin wood and plastics. Largely, extrusion is employed in their manufacturing process, followed by injection molding.

The report forecasts the global wood-plastic composites to grow at a CAGR of 14.43% by volume over the period 2014-2019.
