Global Stationary Diesel Generator Market 2015-2019

Description:
Generators are backup devices designed to provide temporary AC or DC power. They can be used as a source of backup or emergency power for residential, commercial, and industrial applications. A typical generator is powered via a fuel engine. Based on portability, generator can be segmented into portable and standby. Portable generators are the best solutions to provide AC power for standby non-hardwired applications. Low-end models support only a few basic home appliances. However, there are high-end portable generators that can provide backup AC power to an entire house. Apart from residential use, portable generators are widely used in commercial buildings as well as industrial and infrastructure sites, that is, where grid is unavailable.

The report forecasts the global stationary diesel generator market to grow at a CAGR of 5.2% over the period 2014-2019.
