User Experience for Mobile Applications and Websites: Design Guidelines for Improving and Usability of Mobile Sites and Apps

Description: Although there are more smartphone users worldwide than desktop and laptop users, the usability of mobile websites and applications is still well behind the usability of desktop websites. This report documents our findings from 15 series of usability studies with users in 6 countries (mostly in the USA, but also in Australia, Hong Kong, The Netherlands, Romania, and the UK). It presents a set of design recommendations intended to help designers create a good mobile user experience.
