"Foot and Ankle Device Market: Device Type (External Fixation, Internal Fixation, Soft Tissue Orthopedic, Joint Implants) Prosthetic (Solid Ankle, Cushion Heel, Single & Multi Axial Prostheses, Others) Bracing & Support (Soft & Hinged Brace) - Forecast (2015-2020)"

Foot and ankle devices are used for the rehabilitation of human foot or ankle system. Foot-Ankle extremity is one of the largest market segments within the category of extremities. The area includes all the muscular parts starting from the ankle joint or the tibiofibular-talus joint and includes muscles, ligaments and tendons associated with the fore-foot, mid-foot and hind-foot region. The foot and ankle devices market include devices that help in ligament repair and reconstruction procedures including arthrodesis, joint replacement and internal fixation.

Based on the type of devices, the foot and ankle devices market is segregated into internal fixation devices, external fixation devices, joint implants and soft tissue orthopedic devices. Internal fixation devices are used extensively in the foot and ankle surgical procedures. There are various types of internal fixation devices such as screws, fusion nails, pins and plates. The external fixation devices such as unilateral, hybrid and ring ankle fixators are of great importance in minimally invasive surgeries. Soft tissue orthopedic devices include artificial tendons and ligaments and musculoskeletal reinforcement devices.

The prosthetics segment includes single axial prosthesis, multi axial prosthesis, solid ankle cushioned heel (SACH), microprocessor controlled prostheses and dynamic response prostheses. The demand for foot and ankle prosthetics has witnessed tremendous increase with the advent of advanced materials such as carbon fiber. The introduction of microprocessor controlled prosthetic foot increased the comfort level of the patient with respect to locomotion. The aim of developing a prosthetic foot is to keep it firm and comfortable during movement. Bracing and support devices market is segmented into two types as soft bracing and hinged bracing. They are advised based on the type of injury such as minor strain or twist. They braces are also useful during postoperative recuperation.
