Compaction Machines Market: Global Industry Analysis and Opportunity Assessment 2015 - 2025

Description: The global compaction machines market deals with machines that are used to compact or reduce the size of the soil, gravel, trash, concrete or asphalt used in the construction of roads, dams and airports, and in other construction related activities. Road rollers normally use the weight of the vehicle to compact the surface being rolled or use its mechanical advantage through vibration by getting enough power from its engine. Compaction machine plays an essential role in a wide range of road construction projects. Streets and highways, airport runways and most types of structures cannot be built without proper compaction of the base material under paved surfaces.

There has been a significant investment being made in infrastructure globally, with the rise witnessed in the number of paved roads, which is expected to fuel the compaction machines market over the forecast period. The global compaction machines market is expected to expand at a steady CAGR of 6.2% over the forecast period (2015-2025), to account for US$ 6,310.7 Mn by the end of 2025.

To understand and assess the opportunities in this market, the report is categorically split into three sections, namely introduction and overview of the market, market analysis and forecast on the basis of all types of products and categories, and regions.
