Global Bipolar Disorder Therapeutics Market 2015-2019

Description: Bipolar disorder is a psychological disorder characterized by intermittent mood swings. The individual suffering with this disorder experiences extreme poles of either mania or depression or both. The disorder severely affects the personal, social, and professional life of an individual. The symptoms usually include drastic changes in mood, either as a manic episode or a depressive episode. There is no complete cure for the disorder. Atypical antipsychotics, mood stabilizers, and antidepressants are being widely used in for treatment. It is considered as a lifelong disease and the discontinuation of the medication can lead to relapse of the condition.

The report forecasts the global bipolar disorder therapeutics market to grow at a CAGR of 2.24% over the period 2014-2019.
