Infusion Pump Market - by Product (Volumetric, Syringe, Feeding, Insulin, PCA Pump), Application (Chemotherapy, Gastroenterology, Diabetes, Pain Management), & by End User (Hospital, Home Care, Ambulatory Surgery Centers) - Global Forecast to 2020

Description: The global infusion pump market was valued at USD 7,281.6 Million in 2014. This market is expected to grow at a CAGR of 5.8% during the forecast period (2015-2020) to reach USD 10,209.4 Million by 2020. The growth in this market is mainly driven by the increasing prevalence of chronic diseases owing to the rising geriatric population; increasing use of infusion products in homecare with favorable reimbursement coverage; and technological improvements in infusion products. However, the presence of stringent regulations for product approval and medication errors associated with infusion pump (and related product recalls in the recent past) may restrain the growth of the market during the forecast period.

By product, the market is segmented into devices and accessories. accessories (comprising dedicated and non-dedicated disposables) accounted for the largest share of 68.0% of the market in 2014. This segment is expected to grow at the highest CAGR of 6.2% during the forecast period. The market is segmented into volumetric, syringe, insulin, enteral, ambulatory, patient-controlled analgesia, and implantable infusion pump.

The increasing demand for insulin and ambulatory infusion pump are driving the demand for these pumps during the forecast period. Certain infusion pump enable mobility of patients during their treatment, owing to which they are increasing being preferred in home care application. Moreover, the implementation of government initiatives to reduce the overall healthcare cost associated with longer hospital stays is supporting the use of infusion systems in home care settings.

North America is the largest regional segment of the global infusion pump market. In 2014, North America accounted for the largest share of 48.7% of the market, followed by Europe, Asia-Pacific, Latin America, and the Middle East and Africa. The large share of this region can be attributed to the high prevalence of chronic diseases; rising penetration of smart pumps; high adoption of ambulatory pumps in the management of chronic diseases; and well-established healthcare infrastructure in the region.

Asia-Pacific countries (particularly China and India) are expected to offer significant growth opportunities for market players in the forecast period owing to the large patient population, increasing incidence of chronic diseases with changing lifestyles, increasing accessibility to advanced products, improving healthcare facilities, and increasing disposable income of the middle class population.
