Global Market for Polyurethane Injections - By End Use and Geography (2015 - 2020)

Description: Global Market for Polyurethane Injections is estimated to grow at a CAGR of about 6.7% within the forecast period. Europe is the largest market followed by North America and Asia-Pacific growing at a fast pace. Of an estimated $39 billion market for construction chemicals, slab repair accounts for a $1.6 billion share.

The polyurethane injection market has a competitive edge over other polymeric repair systems. Compared to other polymers like epoxy coatings and urethane coatings, polyurethane coatings generally have higher durability and performance. Their greater flexibility allows for natural concrete movement without cracking due to changing soil pressures or movements in the settlements.

Polyurethane based concrete repair systems also contribute to sustainability rating of the buildings along with its economic value. This is because it uses very less water and has an impressive carbon reduction rating. Polyurethane systems reduce the amount of new concrete needed through repair and facilitating restoration versus rebuild, and replacing traditional cement based materials in construction.

Polyurethane injection systems have been proven to be a cost-effective method to repair, restore and rehabilitate concrete structures than the traditional practices. Financial advantage in repairing versus rebuilding is the central reason for the forecasted growth in Polyurethane Injections industry despite the projected slump in construction activity.
