Code of Practice for Programme Management. In the Built Environment

Description:

This is the first Code of Practice for Programme Management for the Built Environment. It is a natural development from the highly successful Code of Practice for Project Management for Construction & Development, which was first published in 1992 and is currently in its Fifth Edition. Both Codes of Practice were developed by representatives from the major professional Institutions associated with the built environment including the CIOB, RICS, RIBA, ICE and APM, as well as from key government departments, domestic and international corporations and the university sector. By aligning, coordinating and managing a number of related projects as a programme, benefits which would not have been possible to realise had the projects been managed independently can be delivered. This Code of Practice is intended to provide practical coverage of the general processes and procedures to be followed when managing such a programme. It sets out the necessary requirements for effective and efficient programme management, while at the same time ensuring systematic quality control and documentation through governance arrangements. Written for programme and project management professionals in construction, whether working as contractors or clients, the book will also be of interest to advanced undergraduate and postgraduate students of construction and related disciplines.
