Biotechnology in Flavor Production. 2nd Edition

Description: Throughout history, human beings have sought ways to enhance the flavor of the foods they eat. In the 21st century, biotechnology plays an important role in the flavor improvement of many types of foods. This book covers many of the biotechnological approaches currently being applied to flavor enhancement. The contribution of microbial metabolism to flavor development in fermented beverages and dairy products has been exploited for thousands of years, but the recent availability of whole genome sequences of the yeasts and bacteria involved in these processes is stimulating targeted approaches to flavor enhancement.

Chapters discuss recent developments in the flavor modification of wine, beer, and dairy products through the manipulation of the microbial species involved. Biotechnological approaches to the production of specific flavor molecules in microbes and plant tissue cultures, and the challenges that have been encountered, are also covered, along with the metabolic engineering of food crops for flavor enhancement – also a current area of research. Biotechnology is also being applied to crop breeding through marker-assisted selection for important traits, including flavor, and the book looks at the application of the biotechnological approach to breeding for enhanced flavor in rice, apple, and basil. These techniques are subject to governmental regulation, and this is addressed in a dedicated chapter.

This updated second edition features five brand new chapters, and the topics covered in the book will be of interest to those in the flavor and food industries as well as to academic researchers interested in flavors.

Contents:
Contributors xi
Preface xv
Chapter 1 The flavor of citrus fruit 1
Ron Porat, Sophie Deterre, Pierre Giampaoli and Anne Plotto
Introduction 1
Taste components of citrus fruit 3
Sugars 5
Acids 6
Bitter compounds 6
Aroma compounds of citrus fruit 8
Terpene hydrocarbons 9
Aldehydes 10
Alcohols 11
Esters 11
Ketones 11
Other volatiles 12
Citrus genes involved in flavor production 12
The unique flavor of different citrus species 13
The flavor of oranges 14
The flavor of mandarins 14
The flavor of grapefruit 15
The flavor of lemons 16
Accumulation of off-flavors in fresh citrus fruit during postharvest storage 17
Flavor of citrus essential oils 19
Acknowledgments 24
References 24
Chapter 2 Aroma as a factor in the breeding process of fresh herbs the case of basil 32
Nativ Dudai and Faith C. Belanger
The importance of selecting for aroma in breeding of aromatic plants 32
The importance of genetic factors regarding the essential oil composition in aromatic plants 32
Sweet basil and the Ocimum genus 34
Uses of sweet basil 34
The chemistry of the aroma factors of plants: the essential oil 36
Essential oil profiles of common commercial basil varieties 36
Comparison of chemical analysis methods 41
Variation of the volatile compound composition within the plant 43
Variation of aroma compounds within cultivars and the potential for selection 45
Biosynthetic pathways of basil aroma components 47
Inheritance of aroma compounds in basil 50
Interspecific hybridization among Ocimum species 52
Applications of biotechnology-based approaches to modification of basil aroma 53
References 54
Chapter 3 Novel yeast strains as tools for adjusting the flavor of fermented beverages to market specifications 62
Jan H. Swiegers, Sofie M.G. Saerens and Isak S. Pretorius
Introduction 62
Wine 63
Beer 63
Saké 64
Wine, beer, and saké yeasts 64
Wine yeasts 65
Beer yeasts 67
Saké yeasts 67
Acids 69
Non-volatile acids 69
Volatile acids 72
Alcohols 74
Ethanol 74
Glycerol 76
Higher alcohols 78
Esters 83
Carbonyl compounds 91
Acetaldehyde 91
Diacetyl 93
Volatile phenols 95
Sulfur compounds 98
Sulfides 98
Mercaptans 102
Thiols 102
Monoterpenoids 106
Conclusion 109
References 109

Chapter 4 Biotechnology of flavor formation in fermented dairy products 133
Balasubramanian Ganesan and Bart C. Weimer

Introduction 133
Biochemistry of dairy fermentations 135
Biotechnology and flavor 138
Flavor production from bacteria 147
Comparative genomics of flavor production 149
Expression and metabolite analysis 154
Predictive bioinformatics 155
Non-culturable lactococci 156
Translation of omics to biotechnology 156
Chapter 5 Biotechnological production of vanillin
Daphna Havkin-Frenkel and Faith C. Belanger

Introduction

Biosynthesis of vanillin
Natural occurrence of vanillin
Site of vanillin production in vanilla beans
Vanillin biosynthetic pathway in Vanilla planifolia
Production of vanillin by biotechnology

Introduction

Use of microorganisms
Use of plant tissue culture
Use of enzymes
Use of physical and mild chemistry methods
Synthetic vanillin
Vanillin from vanilla beans
Regulations
Conclusions and future outlook

References

Chapter 6 Plant cell culture as a source of valuable chemicals
Chee-Kok Chin

Introduction

Establishment of callus culture
Initiation and maintenance of cell culture
Production of valuable chemicals by cultured plant cells
Metabolic engineering to improve chemical production
Concluding remarks

References

Chapter 7 Increasing the methional content in potato through biotechnology
Rong Di

Flavor compound methional in foods
Formation of methional
Varietal and developmental differences 267
Effect of storage 268
Effect of processing 269
Effect of 1-methylcyclopropene treatment 270
Hypoxia 270
Gene isolation 271
Genetic studies, linkage maps, and marker-assisted selection 271
ESTs 272
Transgenic approaches 273
Ethylene production and softening (ACS   ACO) 274
Consumer perceptions and sensory testing 274
References 275

Chapter 11 Biosynthesis and perception of melon aroma 281
Itay Gonda, Yosef Burger, Arthur A. Schaffer, Mwafaq Ibdah, Yakov Tadmor, Nurit Katzir, Aaron Fait and Efraim Lewinsohn

Introduction 281
Volatile composition of melon fruit 283
Odor perception 288
Biosynthesis of melon aroma volatiles 292
Terpenoids 292
Fatty acid-derived volatile aldehydes 293
Amino acid-derived aroma compounds 294
Formation of volatile alcohols from volatile aldehydes 296
Formation of volatile esters from volatile alcohols 297
The interphase between volatile and non-volatile metabolites 298
Changes of volatile profiles in transgenic melons inhibited in ethylene production 299
Concluding remarks 299
References 300

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB98533083313083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
