Global Testing PaaS Market 2015-2019

Description:

About testing PaaS

Software testing is carried out to identify the functional faults of a software prior to its release in the market. The process includes validation methods and procedures to test and execute the code under testing conditions. Testing can be offered on cloud or on-premise. On cloud, testing is done through SaaS, IaaS, and PaaS models. Testing PaaS is a cloud-based platform that helps organizations transfer testing facilities to a third party. The testing PaaS model offers a simplified solution for managing issues coming from variability. Depending on the end-user, the amount of infrastructure used can be increased or decreased for managing the existing system. In addition, PaaS is considered an option for iterative tasks as these can be measured and quantified. PaaS is preferred mostly by organizations that do not have much knowledge regarding the design or the product system. Testing PaaS is growing mostly on public cloud as it is a highly scalable model and helps in cost savings.

The analysts forecast the Global Testing PaaS Market to grow at a CAGR of 30.96 percent over the period 2014-2019.

Covered in this report

This report covers the present scenario and the growth prospects of the global testing PaaS market for the period 2015-2019. The report describes the size of the market based on direct revenue, generated from issuing new subscriptions, technical support, and software maintenance.

The report, Global Testing PaaS Market 2015-2019, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects in the coming years. The report also includes profile of key vendors operating in this market.
