Natural Language Processing and Computational Linguistics. Speech, Morphology and Syntax

Description: This book aims to develop a panoramic review of both classical and modern works in the field of NLP. It offers a unified view of fields often considered divergent such as speech processing, computational linguistics, natural language processing and knowledge engineering. He also wants to deeply interdisciplinary considering, as possible, equal linguistic and cognitive models, algorithms and computer applications. He thus expressed the opinion, repeatedly certified in NLP and elsewhere, that the best results can only be the fruit of marriage a good theory with a well–designed empirical approach.
